SUBJECT NEW POND CRETE, SALT CRETE, AND SEWER SLUDGE STORAGE AREA

Environmental Management supports the storage of Pond Crete, Salt Crete and Sewer Sludge on the new mixed waste storage pad located west of the 903 pad. Storage in the final packaging configuration with protective tarp over cover should provide adequate environmental protection.

We intend to collect and analyze precipitation samples for the pad to verify that run off which drains into the interception ditch and Pond C-2 does not constitute an environmental hazard. To accomplish run off collection for sampling, it is requested that a berm be placed around the new storage pad.

G. L. Potter, Manager
